

Sometimes things in this biz can get pretty hairy.

Keeping up with the competition while keeping your office running smoothly can feel like, well ... skiing on ice.

Don't let it get you down. Good data management is still the key to your company's success. And we can help.

**Meet CLIO.**

CLIO is an **enterprise data broker** - with smarts. CLIO can transform and route data across your department, or across the world, in the bat of an eyelash. So don't let the good looks fool you. No more hassling with legacy and XML-based message types. CLIO knows how to manage data.

CLIO also supports a wide variety of communications and security protocols, with persistence options in just about any relational (RDB) or XML:DB data store.

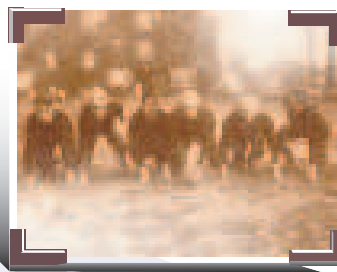

The CLIO Financial Product Suite includes

- \* **Enterprise Service Bus** (CLIO ESB) - pluggable service components for task scheduling, registry management, and data transformation,
- \* **Web Clients** - browser-based applications for transaction entry, application monitoring, and system administration, and
- \* **mesgX Studio** - a desktop tool for converting legacy data to XML-based formats.

**The Team's All Here.**

The most recent addition to the CLIO product line is the mesgX Data Transformation Studio. This desktop tool enables **on-demand document conversion** from legacy formats to XML formats like FIXML, FpML, and MDDL. Like all of our products, mesgX provides out-of-the-box support for W3C XML, as well as legacy formats such as

- fixed-position
- tag-based
- comma-separated-values (CSV)
- DDL

Best of all, mesgX is powered by the CLIO engine. That means your mesgX design can be dynamically registered and scheduled as a CLIO ESB task to run anywhere on the network - 24x7.

And yes, Virginia, do bring along your database.

**Still Curious?**
