mesgX Data Transformation Studio™

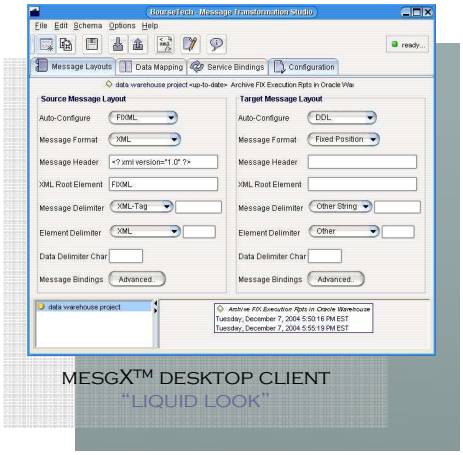
Announcing a nimble desktop addition to the CLIO Financial Product Suite™

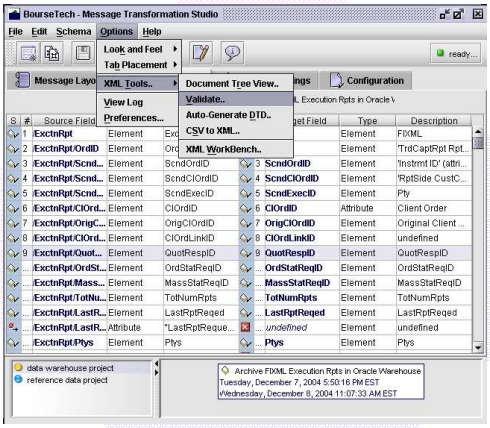
Finally, A Desktop Tool That Bridges the Enterprise "Data Gap"

mesgX Data Transformation Studio™ gives business users the ability to convert legacy data into standards-based XML with ease.

mesgX mappings (called "specifications") provide the basis for dynamic data transformation. Data transformations can be performed on documents, messages, or in-stream data "on-demand". Go from legacy data to XML with just a few mouse-clicks.

mesgX mappings can be registered with a CLIO Transformation Agent. There, transformations will be applied in-stream or batch, and optionally routed across the CLIO Enterprise Service Bus (CLIO ESB) to their intended recipient.





point-n-click schema import

Financial Standards-Aware

As a component of the CLIO Financial Product Suite™, mesgX is tailor-made for financial applications. It provides internal auto-configuration of industry-standard message formats such as FIX 4.x, FIXML, and MDDL.

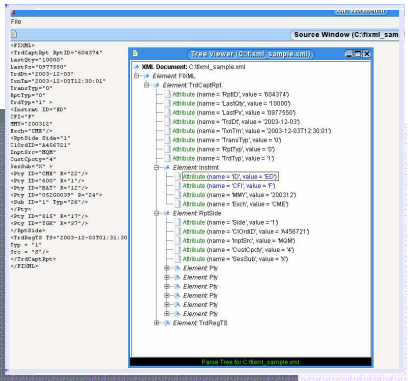
Supported legacy formats include

- Comma-Separated Values (CSV)
- Fixed-Position
- DDL

Check Your Work with XML WorkBench

mesgX™ comes bundled with our XML WorkBench tool. XML WorkBench provides in-depth analysis, validation, and XPath querying on XML 1.0 and W3C XML (Schema) documents. With a single click you can instantly produce a compatible DTD for a newly generated XML document.

mesgX is 100% Java code, so it runs on any desktop. We invite you to try it out on your next project. Let us know what you think!



Ad-hoc document analysis is a breeze with the handy **XML WorkBench** component
